

World in Brief: An earthquake rocks Colombia; Trump demands compensation from Iran

Photograph: Anadolu via Getty Images

An **earthquake** rocked western **Colombia**, killing at least 111 people and trapping many more beneath rubble. The earthquake of magnitude 7.4 struck in and around Colombia's Chocó region, toppling buildings across the province. The central-western cities of Cali, Pereira and Manizales were also hit, with paramedics from Bogotá called to aid rescue efforts. Officials warned the death toll may yet rise.

Donald Trump dismissed **Iran's** demand for compensation for damage caused by the war. In fact, he posted, Iran should pay for the "damages and death" it has caused across the Middle East, including in Lebanon and Gaza, by promoting conflicts and detonating "roadside bombs". Earlier Iran said it would not open the [Strait of Hormuz](#) until America ended its blockade of Iranian ports.

A **Ukrainian drone strike** on the western Russian city of Nizhnekamsk killed at least 13 people, including a child. The attack is one of Ukraine's deadliest on Russian soil in recent months. Nizhnekamsk is an important oil-refinery hub and a strategic target in [Ukraine's campaign](#) to undermine Russian energy infrastructure.

Meanwhile a Russian artillery attack in Ukraine's Kharkiv region killed five people.

Mr Trump signed an executive order that calls for changes to federal recommendations for administering **vaccinations to children**. It proposes fewer immunisation shots and splitting the measles, mumps and rubella vaccine into three separate jabs. Mr Trump linked rising vaccine rates to cases of autism in children, without evidence. It's unclear how the order affects the [recommendations](#) issued by the Centres for Disease Control and Prevention.

Intel announced plans to sell \$15bn in common stock. The American chipmaker said “unprecedented investment” in AI had created strong demand for its products. It will use part of the money to fund \$20bn of capital expenditures this year. The price of Intel's shares, which has surged because of the AI boom, fell on the news that it would issue more of them.

Three football confederations accused FIFA and its president, **Gianni Infantino**, of “deception”. In an open letter, UEFA, Concacaf and the Asian Football Confederation said that Mr Infantino had committed “a fundamental breach of trust” with his FIFA Forward Enterprise proposal—a [plan](#) to sell off portions of FIFA's commercial rights to private investors. The scheme was scrapped after it prompted a big backlash.

Mark Zuckerberg outlined plans to distribute freely available AI models to “billions of people” in an essay published alongside the launch of Muse Glimmer, Meta's new open-source AI. Mr Zuckerberg argued that less restrictive access to AI capabilities will help America compete with [Chinese companies](#), and criticised rivals that sell access to their models.

Figure of the day: 300,000. The approximate number of industrial robots installed in China in 2024—more than half the world's total

that year. But the country is now [worried about displacing its workers](#) by tech.

Ukraine remains vulnerable to Russian missiles

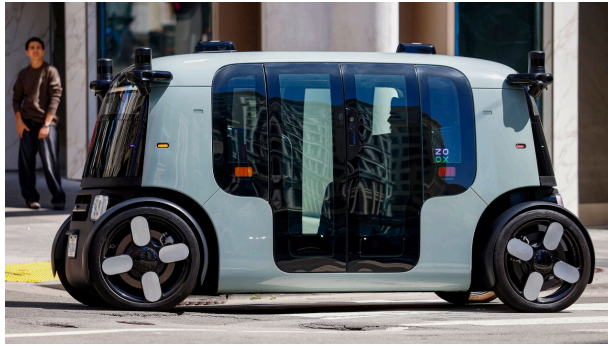

Photograph: AP

In many ways the war is going better for Ukraine. Its strikes deep over the border are bringing the conflict home to Russians. It is also improving recruitment while pioneering new tactics. But Russia's ballistic missiles still pose an existential threat. Last month it launched a record 126 missiles at Ukraine, whose stocks of Patriot interceptors are exhausted. America has used so many in its war against Iran that it is reluctant to sell any more.

Volodymyr Zelensky, Ukraine's president, has begged other countries to loan 300 interceptors to help his country survive the winter. Ukraine and its European allies are also developing a cheaper alternative to the Patriot, though it could be years before that is ready. This week Mr Zelensky said Ukraine would develop its own ballistic and anti-ballistic systems within a year, and that it will continue to target Russian launchers and missile factories. But, for now, Russia's ballistic missiles remain a threat to which it has no real answer.

Amazon's Robotaxis rev up

Photograph: Getty Images

Amazon's Zoox [robotaxis](#) have carried members of the public around Las Vegas and San Francisco for almost a year free of charge, as part of a testing programme. The cartoonish cabs, which have no steering wheel or pedals, are unlike any other car on the road. With an identical front and back (they can drive in either direction), they recall Doctor Dolittle's pushmi-pullyu. From Monday Zoox will start charging Las Vegas passengers a fare

Zoox lags behind Waymo, Google's service, which already charges for rides in more than ten American cities and is expanding abroad. But tech companies are betting that the market for self-driving technology will prove to be vast. Americans already spend around \$50bn a year on ride-hailing services. Then there is the possibility of selling self-driving software to carmakers and manufacturers of other vehicles, such as delivery vans. Soon robots may rule the roads.

The value of Trump's Truth

Photograph: AP

Donald Trump's posts on Truth Social, his social-media platform, frequently move financial markets. Now the platform is trying to cash in. Last week [Trump Media & Technology Group](#), the site's parent in which Mr Trump has a stake of roughly 41%, launched "Truth API", a paid service giving traders and investors faster access to the "most influential accounts". The company has reportedly suggested charging customers up to \$100,000 a month. Critics allege insider trading; the White House has denied a conflict of interest. Trump Media says the product offers "a new long-term recurring revenue stream".

The company, which reports second-quarter earnings on Monday, needs it. Its share price has fallen around 40% in the past year; in the first quarter it posted revenues shy of \$900,000 and net losses of almost \$406m. With ventures in cryptocurrency and streaming seemingly yet to pay off, Kevin McGurn, Trump Media's interim boss, is placing his bets on the value of the president's penmanship—assuming regulators don't clamp down first.

Labour's drilling headache

Photograph: Alamy

On Monday Britain closes public consultation on Jackdaw. The planned [North Sea gasfield](#) (and the larger Rosebank oilfield) is an early test of Andy Burnham's climate credentials. The fossil-fuel industry, some trade unions and right-wing politicians would all like to see their new prime minister move the controversial projects along. Mr Burnham promised Donald Trump that he'll take a "pragmatic approach" to fuel production in British waters.

Daily quiz
